

Relieves joint pain

Glucosamine is the structural component of joint cartilage, tendons, ligaments, and synovial fluid, which functions to lubricate and cushion joints. Glucosamine helps support collagen repair and maintenance between joints and also provides the raw materials necessary for cartilage maintenance.

Why supplement with Glucosamine?

Glucosamine is a component of all human tissues and is found in especially high concentrations in cartilage. It helps the body to manufacture the building blocks of cartilage because as we age, we produce less.

It supports normal joint function and mobility and healthy connective tissue, by promoting the important shock absorbing properties and lubrication of the joint cartilage.

Glucosamine helps reverse the deterioration of cartilage from chronic joint diseases and is effective in reducing joint pain. Glucosamine is used for relief of symptoms of osteoarthritis and actually helps to improve the condition of mild-to-moderate osteoarthritis, instead of just relieving the pain.

Glucosamine may actually help to rebuild cartilage and improve joint health, and when taken in the diet, it may help maintain healthy joints and reduce the problems associated with cartilage breakdown and even osteoarthritis itself.

Who can benefit from a Glucosamine supplement?

Anyone who:

- Wants to improve the health of their joints and reduce the risk of injury
- Suffers from arthritis or joint pain
- Has swelling in one or more joints
- Has limited joint movement
- Suffers from a sports injury

The NUTRIWAY Advantage

Nutriline, the manufacturer of NUTRIWAY supplements, is the leading global brand of vitamins, minerals and dietary supplements¹, producing high-quality products using plant concentrates for the past 70 years.

We are the only global vitamin and mineral brand to grow, harvest and process plants on our own certified organic farms. We control the entire process from seed to supplement, to bring you the best of nature, and the best of science.

1. Based on sales in 2004. In tablet and capsule form. Euromonitor International.

Why NUTRIWAY® Glucosamine HCl with Boswellia?

NUTRIWAY Glucosamine HCl with Boswellia is not a single ingredient supplement. It contains a unique blend of a natural source of Glucosamine, Boswellia and Bromelain with Acerola Concentrate and Lemon Bioflavonoids as the PHYTOFACTORS® Plant Compounds, to help reduce joint inflammation and swelling, increase joint mobility and provide temporary relief from the pain of osteoarthritis.

It may also reduce symptoms of sports injury by repairing damaged cartilage and therefore promoting improved joint junction.

Glucosamine HCl has been effectively proven to control pain and slow or reverse progression of osteoarthritis. The purpose of combining Boswellia and Bromelain together is to help alleviate minor inflammation/pain in, and around, the joint areas, and it may help reduce joint swelling associated with arthritis and help to increase joint mobility associated with arthritis.

Bromelain has been shown to reduce pain and inflammation of the joints, while Boswellia has been proven effective in the treatment of inflammatory and arthritic conditions with a pain relieving property.

There is clinical evidence that people have significant improvement and build joint cartilage when supplementing with 1,500 mg of glucosamine hydrochloride per day. It has been effectively proven to control pain and slow or reverse deterioration from osteoarthritis.

To ensure the natural quality of glucosamine Nutrilite the manufacturer of NUTRIWAY only uses Arctic prawns, from the frigid, pristine, mineral-rich water of the North Atlantic Ocean to source the freshest prawns in the world. This means that the prawns are not farmed or treated with antibiotics.

- Contains 375 mg of Glucosamine Hydrochloride (from prawns) to help alleviate minor inflammation/pain in, and around, the joint areas and it can help to increase joint mobility. It may reduce the symptoms of sports injury by repairing damaged cartilage and therefore promoting joint function and mobility

NUTRIWAY® GLUCOSAMINE HCl WITH BOSWELLIA

- Contains 28 mg of Boswellia, a highly researched Indian Herb used in Ayurvedic medicine predominantly used as an anti-inflammatory treatment. Boswellia has been associated with alleviating osteo and rheumatoid arthritic inflammation and stiffness of the joints. Helps to alleviate the cause of minor inflammation around the joint area by stimulating the production of synovial joint fluid that lubricates the joint and has been shown to effectively control and reduce joint pain
- Contains 29 mg of Bromelain, a proteolytic enzyme extracted from the pineapple plant juice that has anti-inflammatory properties and helps speed recovery from sports and other minor injuries
- Contains 8.7 mg of Citrus Bioflavonoid as the PHYTOFACTORS® Plant Compounds to provide antioxidants and phytonutrients, which are naturally present in plants and fruits
- Acerola Extract equivalent to 58 mg Acerola (*Malpighia punicifolia*) as the PHYTOFACTORS® Plant Compounds to provide unique plant materials which have additional antioxidants and phytochemicals, as well as flavonoids and a natural source of vitamin C
- NO artificial colour, flavour or preservatives added Especially suitable for those who want to avoid artificial additives
- NO added dairy, sugars, yeast and lactose
- Product reviewed, tested and approved by consumerlab.com

Dosage: Adult – Take two capsules twice a day.

- 120 capsules per bottle

Regular exercise helps to avoid further stiffening often associated with arthritis.

Advisory: Children under 12 years of age, pregnant or lactating women, or anyone with a medical condition including diabetes and hypo-glycemia should consult with a healthcare professional before using this product. Keep bottle tightly closed. Store in a cool, dry place below 25 °C.

Active Ingredients

	Per Capsule
Glucosamine HCl	375 mg
Boswellia (<i>Boswellia Serrata</i>) (plant)	28 mg
Equivalent to Boswellia Serrata gum	150 mg
Citrus Bioflavonoid	8.7 mg
Bromelain	29 mg
Equivalent to Pineapple fresh fruit	58 mg

Complementary supplements: NUTRIWAY Omega-3 Complex – which is an essential fatty acid beneficial for inflammatory conditions such as arthritis.

NUTRIWAY Calcium Magnesium – Calcium is the major mineral found in bones. May be of assistance in the prevention and treatment of osteoporosis by helping minerals to deposit onto the bone making the bones stronger.

Always read the label. Use only as directed. If symptoms persist see your healthcare professional.

Why are phytonutrients important?

Nature created plants, fruits and vegetables to be full of other nutrients beyond vitamins and minerals, called phytonutrients. Research has shown that a diet high in phytonutrients can help decrease degenerative disease.

That's why our supplements are a combination of essential vitamins and minerals and the exclusive Nutrilite PHYTOFACTORS® Plant Compounds, for additional bioflavonoids, antioxidants and other phytonutrients, because of their valuable role in protecting your health.

Frequently Asked Questions

- Q.** What is the difference between Glucosamine Hydrochloride which is used in the NUTRIWAY Glucosamine HCl with Boswellia, and Glucosamine Sulfate often found in the marketplace?
- A.** The benefit of Glucosamine Hydrochloride over Glucosamine Sulfate is that it delivers more Glucosamine with the same amount of raw material. This equates to a smaller capsule size and reduced consumption of fillers such as sodium or potassium chloride that are used to stabilise Glucosamine Sulfate.
- Q.** If I am allergic to prawns, can I still take Glucosamine?
- A.** Allergic reactions to prawns or other shellfish usually come from specific protein in the meat, not the shells. NUTRIWAY Glucosamine HCl with Boswellia is from prawn shells. So people who are allergic to prawns should not experience any reactions from using it. However we recommend that you consult a doctor before taking it.
- Q.** What are the benefits of Glucosamine HCl in comparison to non-steroidal anti-inflammatory drugs?
- A.** Glucosamine does not produce the side effects associated with conventional therapies such as aspirin and non-steroidal anti-inflammatory agents (NSAIDs).
